implementazione necessaria di isRouteDisplayed() per motivi "amministrativi" definiti nei termini di licenza.

Mapliew

<com.google.android.maps.MapView
android:layout_width="fill_parent"
android:layout_height="fill_parent"
android:apiKey="<mia chiave>" />

<uses-permission android:name="android.permission.INTERNET" />
<uses-permission android:name="android.permission.ACCESS COARSE LOCATION" />

<uses-library android:name="com.google.android.maps" />

<com.google.android.maps.MapView
android:layout_width="fill_parent"
android:layout_height="fill_parent"
android:apiKey="<mia chiave>" />

```
<uses-permission android:name="android.permission.INTERNET" />
<uses-permission android:name="android.permission.ACCESS_COARSE_LOCATION" />
```

<uses-library android:name="com.google.android.maps" />

android:layout_width="fill_pare android:layout_height="fill_pare android:apiKey="<mia chiave>",

```
<uses-permission android:name="android.permission.INTERNET" />
<uses-permission android:name="android.permission.ACCESS_COARSE_LOCATION" />
```

<uses-library android:name="com.google.android.maps" />

```
public class EsempioActivity extends MapActivity {
  @Override
  public void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.main);
    MapView mapView = (MapView)findViewByld(R.id.mapview);
    mapView.setClickable(true);
    mapView.setBuiltInZoomControls(true);
    mapView.setSatellite(true);
  @Override
 protected boolean isRouteDisplayed() {
 return false;
```

public MapController getController()

- centrare la mappa in una particolare location
- gestire delle animazioni di posizionamento della mappa
- gestire lo zoom

GeoPoint public GeoPoint(int latitudeE6,int longitudeE6)

latitudine in gradi per 1E6

longitudine in gradi per 1E6

int lat = 41891121;

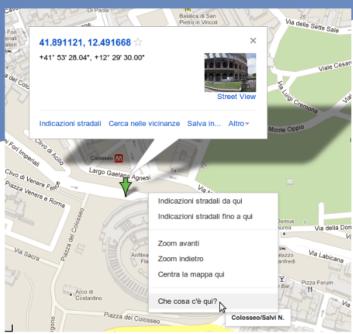

t(int latitudeE6,int longitudeE6)

latitudine in gradi per 1E6

longitudine in gradi per 1E6

int lat = 41891121;

int lon = 12491668;

MapController

Centrare la mappa in un punto

GeoPoint romaGeoPoint = new GeoPoint(41891121,12491668); mapController.setCenter(romaGeoPoint);

Zoom

mapController.setZoom(int);
mapController.zoomIn();
mapController.zoomOut();

Animare un posizionamento

public void animateTo(GeoPoint point)
public void animateTo(GeoPoint point, android.os.Message message)
public void animateTo(GeoPoint point, java.lang.Runnable runnable)

GeoPoint romaGeoPoint = new GeoPoint(41891121,12491668); mapController.animateTo(romaGeoPoint);

Centrare la ma

GeoPoint romaGeoPoint = new GeoPoint(41891121,12491668);
mapController.setCenter(romaGeoPoint);

mapo

Zoom

```
mapController.setZoom(int);
mapController.zoomIn();
mapController.zoomOut();
```

are un posizion

mapController.zoomOut();

Animare un posi

public void animateTo(GeoPoint point)
public void animateTo(GeoPoint point, android.os.Message message)
public void animateTo(GeoPoint point, java.lang.Runnable runnable)

GeoPoint romaGeoPoint = new GeoPoint(41891121,12491668); mapController.animateTo(romaGeoPoint);

Overlay

Permette di visualizzare elementi georeferenziati

aggiuntivi sulla mappa:

- markers
- posizione utente
- aree e immagini

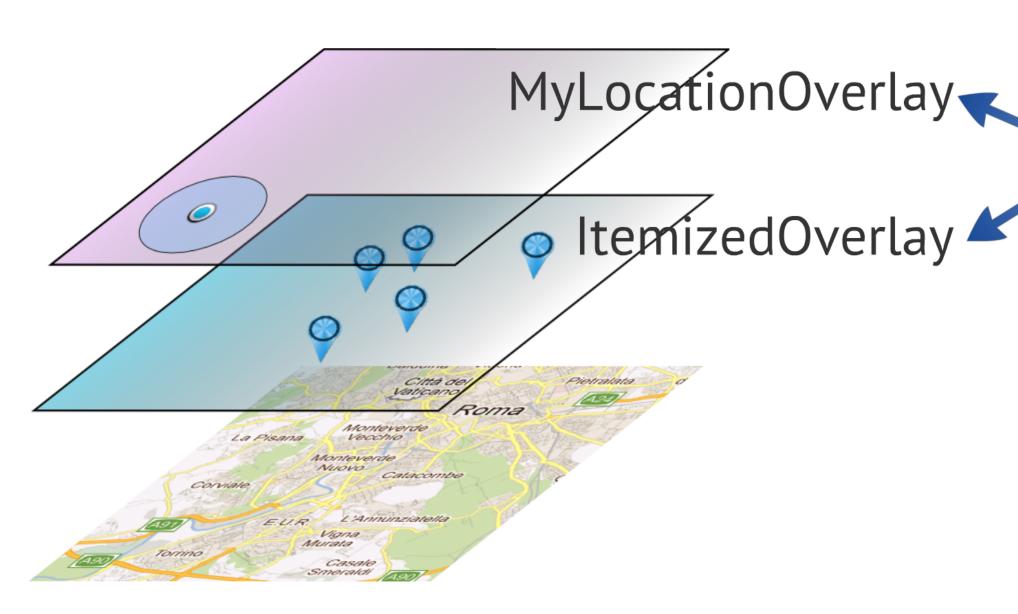

Overlay

public void draw(android.graphics.Canvas canvas, MapView mapView, boolean shadow)

public boolean onTap(GeoPoint p, MapView mapView)

mapView.getOverlays().add(myOverlay);

Localizzazione

LocationManager

- · ricevere notifiche sulla posizione del dispositivo
- lanciare un Intent nel caso in cui l'utente entri in prossimità di una particolare posizione geografica

public void requestLocationUpdates (String provider, long minTime, float minDistance, LocationListener listener)

paths varied authorCompellautine butter()...)
paths varied authorCompellautine butter(...)
paths varied varied battering proving (...)
paths varied batterine battering proving (...)

 $Lacation Manager\ location Manager = (Location Manager) get System Service (Context.LOCATION_SERVICE);$

LocationProvider

forniscono dati di posizione acquisiti da una determinata tecnologia

· GPS

*Quees-permission android:name="android.permission. ACCESS_FINE_LOCATION" />

 public LocationProvider getProvider (String name) public List<String> getAllProviders ()

public String getBestProvider (Criteria criteria, boolean enabledOnly)

LocationManager

public void red minTime, float

- · ricevere notifiche sulla posizione del dispositivo
- lanciare un Intent nel caso in cui l'utente entri in prossimità di una particolare posizione geografica

LocationManager locationManager = (LocationManager)getSystemService(Context.LOCATION_SERVICE);

LocationProvider

forniscono dati di posizione acquisiti

LocationProvider

forniscono dati di posizione acquisiti da una determinata tecnologia

GPS

LocationManager.GPS_PROVIDER

<uses-permission
android:name="android.permission.
ACCESS FINE LOCATION" />

Rete (WiFi e CellID)

LocationManager.NETWORK_PROVIDER

<uses-permission
android:name="android.permission.
ACCESS_COARSE_LOCATION" />

public void requestLocationUpdates (String provider, long minTime, float minDistance, LocationListener listener)

```
public void onLocationChanged(Location location) { ... }

public void onProviderDisabled(String provider) { ... }

public void onProviderEnabled(String provider) { ... }

public void onStatusChanged(String provider, int status, Bundle extras)
```

onUpdates (String provider, long ce, LocationListener listener)

```
public void onLocationChanged(Location location) { ... }

public void onProviderDisabled(String provider) { ... }

public void onProviderEnabled(String provider) { ... }

public void onStatusChanged(String provider, int status, Bundle extras) { ... }
```

proximity...

public void addProximityAlert (double latitude, double longitude, float radius, long expiration, PendingIntent intent)

lastKnowLocation...

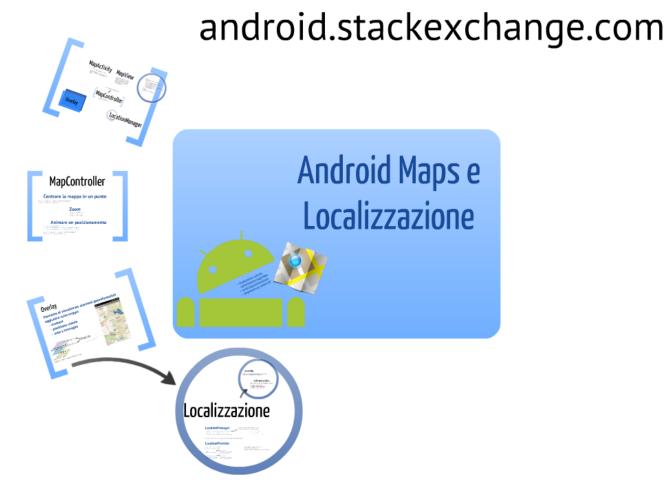

public Location getLastKnownLocation(String providerName);

LocationManager.GPS_PROVIDER LocationManager.NETWORK_PROVIDER LocationManager.PASSIVE_PROVIDER
